

STEVEN WARREN

Senior Engineer

📞 615-310-4274 @ steven@stevenwarren.com 📍 Nashville, TN

EXPERIENCE

Staff Engineer

TeamSnap

📅 01/2020 📍 Remote

Looking for a new challenge, I joined the Platform team with TeamSnap in January 2020. I helped improve the reliability of the microservices that power an ecosystem that supports over 20 million monthly active users. Within my first year at TeamSnap I have been promoted to Staff and an engineering team lead.

- Worked with support to triage critical customer issues
- Upgraded legacy Elixir apps to 1.11 and converted them to use Elixir Releases
- Developed full stack features with Elixir, Phoenix, and Absinthe
- Worked with Staff engineering team to set an API and database scaling strategy across the organization
- Worked with Director of engineering to plan out a new registration service

VP of Engineering

PsychHub

📅 03/2019 - 01/2020 📍 Nashville, TN

I was the first engineer hired to help build an online video platform to link individuals to certified providers in their area. I worked with the leadership team to create an MVP and go to market strategy. I managed the monthly engineering budget and independent contractors all while creating the foundation of their platform in Rails.

- Built consumer video product using Rails, HTML, CSS, and StimulusJS
- Worked with VP of Content to create a streamlined video delivery pipeline with Ruby & Vimeo
- Setup AWS infrastructure and hosting with Cloudfront, S3, EC2, and Elastic Beanstalk

GoNoodle

Lead Engineer

📅 07/2013 - 03/2019 📍 Nashville, TN

I worked at GoNoodle for the initial launch to 1000 beta users to scale to over 75% of the classrooms in the United States. I worked across the stack from AWS to HTML to create customer-facing features that reached over 14 million children per month. Aside from engineering, I help with continuous discovery and roadmap planning to make GoNoodle a leading brand in the kid's education space.

- Built classroom product with Backbone.js & Rails
- Built prototype for family product with React & ReactNative
- Worked with product to plan and manage sprint work
- Conducted weekly 1 on 1 with backend engineering team
- Moonlighted as DevOps and managed our AWS infrastructure using Elastic Beanstalk, Cloudfront, and Route53
